

MOLYSLIP®

MTG

Machine Tool Grease

GENERAL DESCRIPTION:

Molyslip MTG is lithium based and has exceptional extreme pressure load bearing capacity. It has high oxidation stability and excellent rust prevention and inhibition properties.

The inclusion of Molybdenum Disulphide as well as Graphite helps to extend maintenance and routine greasing intervals, in addition to offering superior lubrication and added protection.

It has a high melt point, and is resistant to water and soluble oil dilutions.

APPLICATION:

Molyslip MTG is suitable for all lubrication points on machine tools, including heavily loaded and high-speed bearings, slides and chucks. Suitable for ball and roller bearings, particularly medium and high speed, plain bearings, and general machinery lubrication, slides, turrets, spindles, aprons and chucks on metal processing machines.

TECHNICAL DATA:

Base	Lithium
Consistency	N.G.L.I. No.2
Worked penetration at 25°C	265/295
Melting Point	195°C
Total MoS ₂ and Molyslip Special E.P. compounds	9%
Steady Working Temperature	-30°C to 150°C

PACKAGING:

450g tins boxed in 24's, or
5kg tins boxed in 4's

01 May 2009
