

## RUSOLVENT

### Dismantling and releasing fluid

#### GENERAL DESCRIPTION:

MOLYSLIP RUSOLVENT is a highly efficient dismantling and releasing fluid which rapidly penetrates the finest clearances and cuts through rust and corrosion.

#### PERFORMANCE AND USAGE:

The fluid will readily free nuts, bolts, screws, locks, hinges and all threaded joints. Anything that resists the action of a spanner or screwdriver should be treated with MOLYSLIP RUSOLVENT and left for a few minutes to allow penetration after which it can be readily released.

#### EXTRA INFORMATION:

It is a combination of highly effective wetting and penetrating agents with solvents and lubricating oil of low viscosity. A drop of the fluid is placed on a rusted surface: the penetration and spreading, even in a vertical direction, will immediately be observed.

#### TECHNICAL DATA:

Colour	Green
Specific Gravity at 16°C	0.860
Closed Flash Point (PM)	56°C
Kinematic Viscosity at 40°C	4.0 cSt
Cold Test	Fluid at -40°C

#### PACKAGING:

400ml aerosol boxed in 12's  
5 ltr tins packed in 4's  
25 ltr or 205 ltr drums
