

MOLYSLIP

MSS

Silicone Spray and Lubricant

PERFORMANCE:

A specially formulated, non-staining, Silicone spray containing a powerful release agent. MSS has very good covering properties and is economical to use. Its fine spray ensures an evenly controlled coverage with one application. MSS is colourless and provides good temperature stability and electrical resistance.

APPLICATIONS:

As a mould release agent for all plastics and rubber, **MSS** allows easy release from the most complex tools.

MSS is an excellent lubricant for applications where the more usual oils and greases cannot be used, and is especially suitable for all plastics, rubber and wood, and for the lubrication of bearings, conveyors, sliders etc., particularly in the automotive, clothing and furniture industries, where the clean, low toxicity properties of silicone are ideal.

Use **MSS** for polishing plastic, wood rubber and glass - spray lightly and polish with a clean dry cloth to obtain a water repellent polished surface.

MSS will greatly assist the assembly of all types of rubber seals, but must not be used on vehicle windscreens.

TECHNICAL DETAILS:

Contains diluent SBP2 to ensure correct spray pattern.
Viscosity: 350 cSt (centistokes)

PACKING DETAILS:

Available in 400ml aerosol
